Inverter Welding Rectifiers

This series of heavy duty Inverter Welding Rectifiers is suitable for use in DC MMA and TIG welding applications of low and medium carbon steels and also for low alloy and stainless steel both in shopfloors and project sites. The machines are designed with high energy efficiency and excellent dynamic characteristics for stable and consistent arc for high quality welding applications.

SPECIAL FEATURES

- Excellent dynamic characteristics for smooth, stable and spatter-free arc.
- Automatic compensation for input voltage fluctuation.
- Built-in arc force and hot start control.
- Built for heavy duty applications in workshops and project sites

Built-in arc force
and hot start control

■ Save Power ■ Reduce Cost
