

# MG-250 SC MG-315 SC

## Compact MIG / MAG Machines

This series of compact MIG/MAG machines is precision designed and engineered for optimum parametric selection and quality welding applications. The output voltage selector switches facilitate accurate welding voltage setting. This has an in-built wire feeding system making the set extremely flexible and maneuverable. The set is designed for rough and tumble industrial usage. The built-in intelligent protection devices insure the set against high/low voltages, current overload and overheating.

• In-built Wire Feeding System  
• Intelligent Protection System

### Dynamic arc characteristics

Superb dynamic arc characteristics for both CO<sub>2</sub> and Argon rich mixed gases resulting in to very low spatter level and high arc stability

### Precise voltage selection

Precise voltage selection to achieve optimum parametric conditions

### Built-in timer

Built-in burn back and spot weld timer

### Intelligent protection

Intelligent protection for over-voltage, under-voltage, over-current and over-heating

### Easy to handle

Light weight and easy maneuverability
